

# Masurf<sup>®</sup> SP-430/SP-430R StayClean™ Hard Surface Protection System

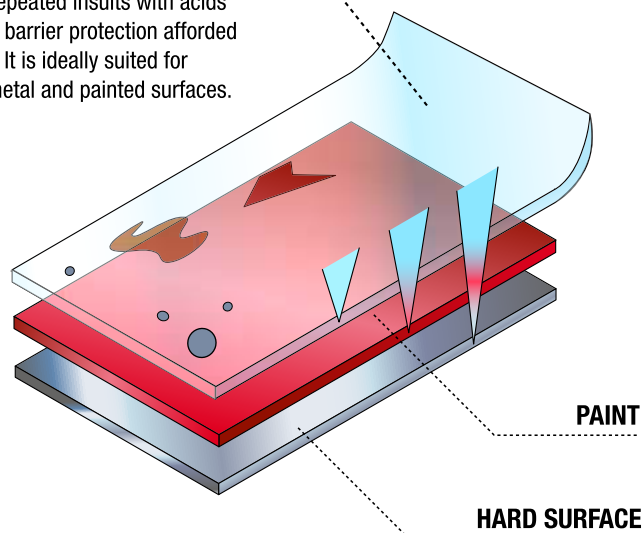

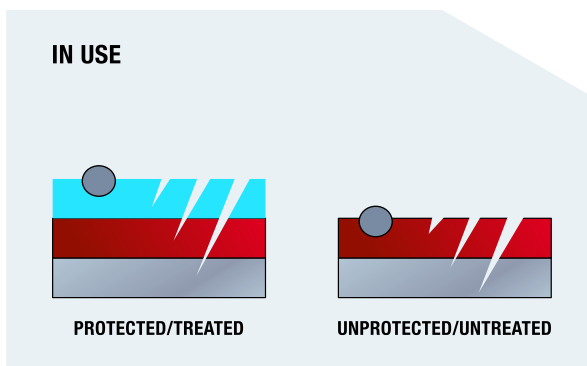

## 1 DESCRIPTION/APPLICATION

Masurf SP-430 is a sacrificial polymeric coating that forms a durable, colorless coating that will withstand extremes of moisture and temperature while protecting surfaces from corrosive agents and abrasive particulate matter.

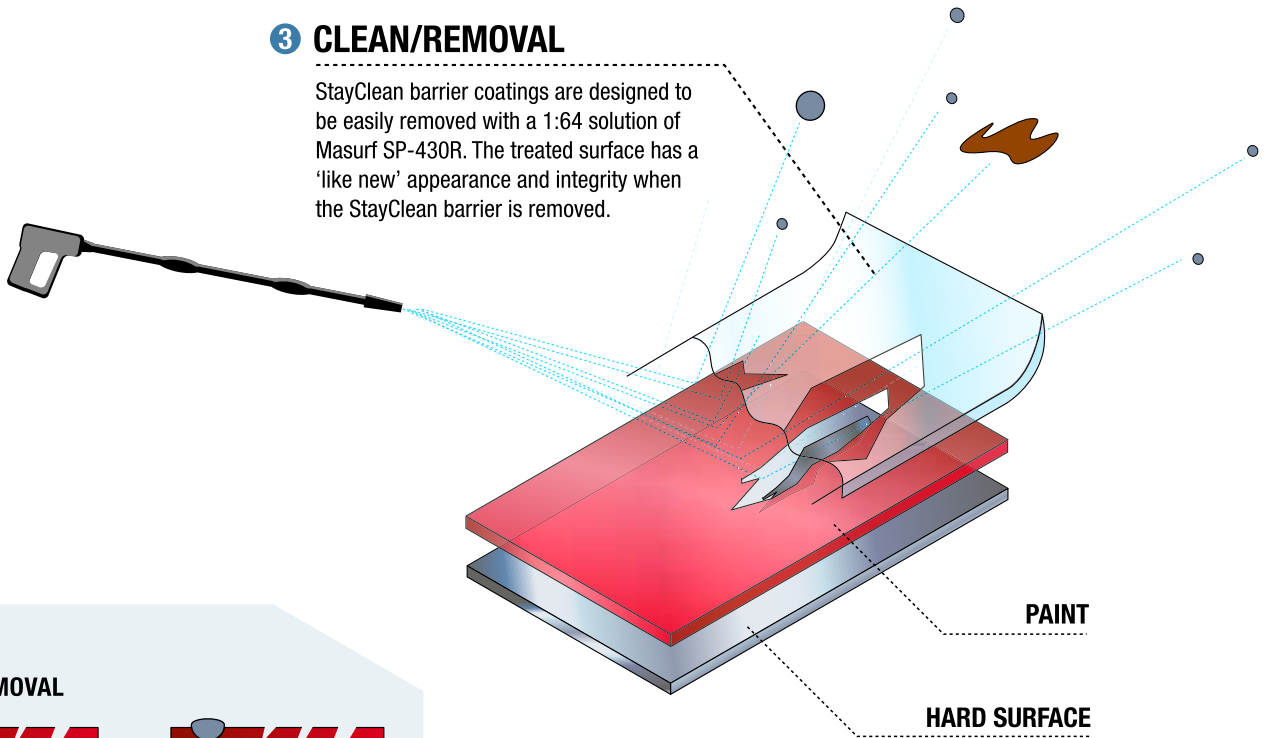

## 2 IN-USE/HOW IT WORKS

Surfaces treated with Mason StayClean technology resist weathering, corrosion, abrasion and repeated insults with acids because of the barrier protection afforded by the coating. It is ideally suited for protection of metal and painted surfaces.

### 3 CLEAN/REMOVAL

StayClean barrier coatings are designed to be easily removed with a 1:64 solution of Masurf SP-430R. The treated surface has a 'like new' appearance and integrity when the StayClean barrier is removed.

#### CLEAN/REMOVAL

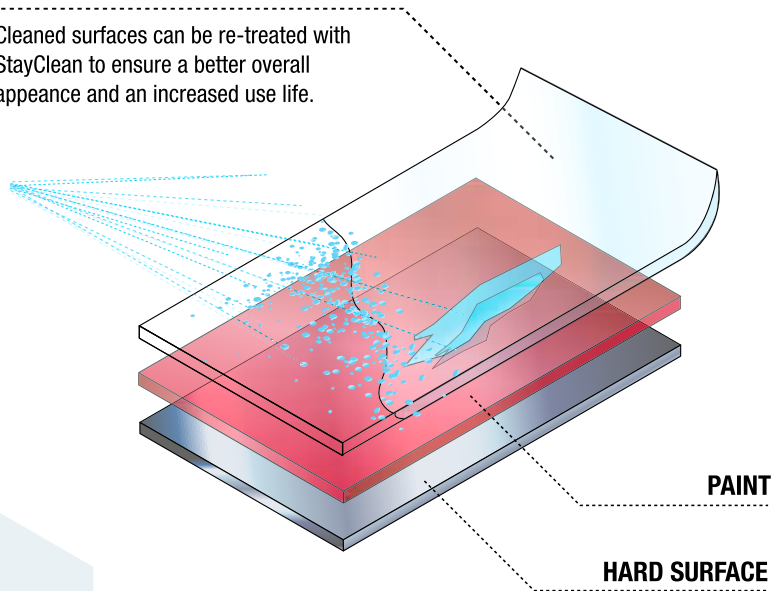

PROTECTED/TREATED

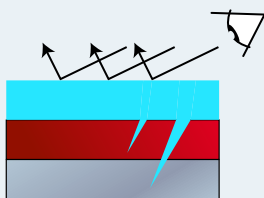

UNPROTECTED/UNTREATED

### 4 REAPPLICATION

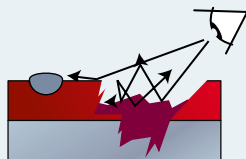

Cleaned surfaces can be re-treated with StayClean to ensure a better overall appearance and an increased use life.
